

FOR IMMEDIATE RELEASE

Friday, October 24, 2008

CanScribe Career Centre has incorporated BenchMark KB in their medical transcription curriculum.

Company Leads Industry in preparing students for employment opportunities.

CanScribe Career Centre announces that they have added the AHDI BenchMark Knowledge Base to their Online Medical Transcription Program. This initiative is an important part of CanScribe Career Centre's continuing strategy to prepare students for meaningful employment upon graduation.

"Our mandate is to provide our students with the most relevant training and the BenchMark KB is a perfect fit. It is a tool that our students will use when they enter the workforce" stated Colleen Gaudet, President and CEO of CanScribe Career Centre. "Training our students on the latest technology gives them a definite advantage when seeking employment. Many of the leading MTSO's are adopting the knowledge base and they will now realize another benefit when hiring CanScribe graduates. The faster our graduates can learn and integrate into an employer's system, the more productive they will be, producing higher quality documents, and proving their value to the employer and in the industry."

BenchMark KB provides its users with a robust knowledge base including Stedman's medical terminology and drug name content, a referring physician database, the AHDI Book of Style, mentoring tools and best practices, all delivered via web services in real time. Developed by InterFix, the Knowledge Base is part of a research initiative with the Association for Healthcare Documentation Integrity (AHDI), formerly the American Association for Medical Transcription (AAMT).

According to Scott Faulkner, CEO of InterFix Ventures, LLC, "As a leader in medical transcription training, CanScribe Career Centre understands the importance of its role in providing tomorrow's workers with the tools they need to create quality documentation in a real-time environment after graduation. BenchMark KB has demonstrated its ability to improve productivity and quality measurements in double digits by hundreds of MTs in production environments on four continents. CanScribe is taking this to the next level by providing its students the same set of tools, which will prepare its students to be some of the most sought after in our industry."

Located in Lake Country, British Columbia, CanScribe Career Centre offers a nationally recognized online medical transcription program in Canada. They were the first, and are still the only Canadian school that has been awarded the Medical Transcription Education Program Approval by the Association for Healthcare Documentation Integrity (AHDI). CanScribe's graduates have the opportunity to work from home or on-site and are sought after by employers throughout North America. www.canscribe.com

InterFix, LLC is a software engineering and information technology consulting company based in Atlanta, GA, USA. InterFix is the integration and automation engineering partner to hundreds of transcription services, clinics, hospitals, government entities, and healthcare software vendors on four continents, the CARICOM Region, and across the United States. www.interfix.biz
